

## The Colors of the Sky

Out my window, I saw clouds. Many, many, many clouds. Then I saw a rainbow. I couldn't see where it was coming from. I decided to go on an adventure to find out! I put on my boots to go.

It looked like it was coming from space. So, I built a rocket ship. I got some wood and tools. Then, I started building it. I found some glass for the window and I put together a seat. I built the biggest, highest rocket ship. I learned all about space to know how to get there. Then I hopped in my rocket ship and voomed off. I saw so many planets and cool comets. Then I found it! The place where rainbows come from. It was the planet Colora! I captured a rainbow to keep forever. The rainbow was named Skyley and she liked play with me and sing me lullabies. I brought her back to Earth and showed the scientists. They said she was an alien. She was really nice and now she is my best friend. I will always love her.

THE END
